2020 TECHNICAL PROGRAM

Applications of Additive Manufacturing in Oil and Gas

📅 Wednesday, 6 May ⌚ 0930 - 1204 📍 600 🟡 Technical/Poster

Additive manufacturing (AM) is to bring about a paradigm shift in the way mechanical design and supply chain integrates with manufacturing; the session intends to put this into context from the viewpoint of AM applications in the oil and gas industry. Showcasing current and future potential AM applications, and the lessons learned in developing these, serves as a great platform to further promote AM for safer, more reliable, more efficient oil and gas operations. This session promotes the application of AM methods for realizing novel, more complex, and highly efficient functional capabilities out of mechanical and structural components that may not have been realized in the past due to the constraints on traditional/conventional manufacturing.

Chairperson(s)

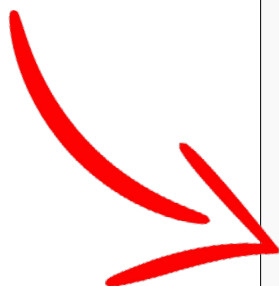

9:30

Additive Manufacturing In Heat Exchangers And Valves

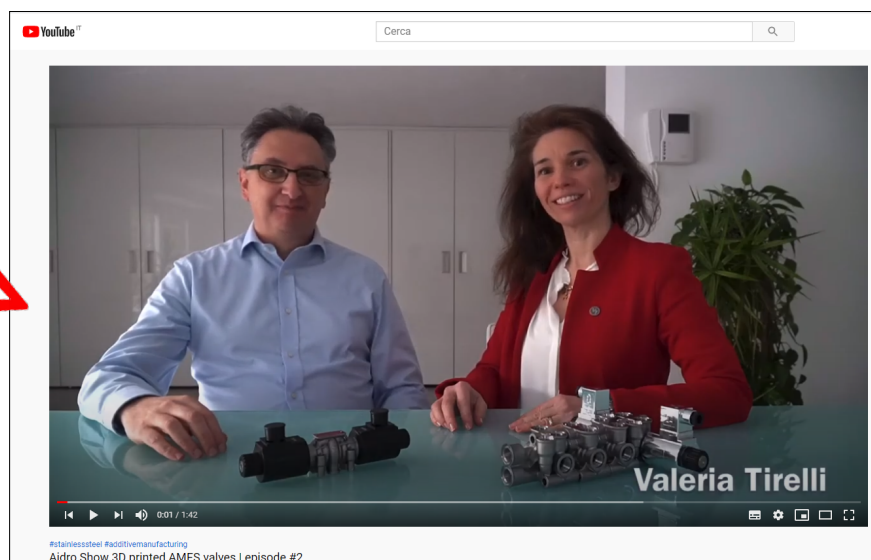

V. Tirelli, A. Tacconelli, AIDRO HYDRAULICS & 3D PRINTING

We have decided to not participate at OTC 2020 and present our new products via Youtube
