

# World of flight

Aidro has hosted personalities and ex-pilots of the Italian Air Force and who have made the history of the Frecce Tricolori (Aerobatic Team), all people very interested in learning about #additivemanufacturing.

One year after the event organized to present AIDRO hydraulics & #3DPrinting's activities to the Aerospace Lombardia Cluster, I can say that it's always very nice to discuss with "world of flight" experts and find new solutions for smart 3D printed parts.

Another milestone for the project #ServoFly, the 3D printed flight control that allows you to fly safety with only one hand!
